# Bulovi operatori

AND	Finds documents containing all of the specified words or phrases. Peanut AND butter finds documents with both the word peanut and the word butter.
OR	Finds documents containing at least one of the specified words or phrases. Peanut OR butter finds documents containing either peanut or butter. The found documents could contain both items, but not necessarily.
AND NOT	Excludes documents containing the specified word or phrase. Peanut AND NOT butter finds documents with peanut but not containing butter. NOT must be used with another operator, like AND.
NEAR	Finds documents containing both specified words or phrases within 10 words of each other. Peanut NEAR butter would find documents with peanut butter, but probably not any other kind of butter.
*	The asterisk is a wildcard; any letters can take the place of the asterisk. Bass* would find documents with bass, basset and bassinet. You must type at least three letters before the *. You can also place the * in the middle of a word. This is useful when you're unsure about spelling. Colo*r would find documents that contain color and colour.

O servisu

Agregatori su proizvođači baza podataka koji referišu časopise više izdavača, čime ih čine dostupnim za objedinjeno pretraživanje. Njihova prednost je i u tome što u sebe uključuju i časopise manjih izdavača, koji su jedino na ovaj način dostupni.

Naslov	Carbon accumulation in cotton, sorghum, and underlying soil as influenced by tillage, cover crops, and nitrogen fertilization
Autor(i)	Sainju U M Whitehead W F Singh B P
Abstract	<p>soil and crop management practices may influence biomass growth and yields of cotton (<i>Gossypium hirsutum</i> L.) and sorghum (<i>Sorghum bicolor</i> L.) and sequester significant amount of atmospheric CO<sub>2</sub> in plant biomass and underlying soil, thereby helping to mitigate the undesirable effects of global warming. This study examined the effects of three tillage practices [no-till (nt), strip till (st), and chisel till (ct)], four cover crops [legume (hairy vetch) (<i>Vicia villosa</i> Roth), nonlegume (rye) (<i>Secale cereale</i> L), hairy vetch/rye mixture, and winter weeds or no cover crop], and three N fertilization rates (0, 60-65, and 120-130 kg N ha<sup>-1</sup>) on the amount of C sequestered in cotton lint (lint+seed), sorghum grain, their stalks (stems+leaves) and roots, and underlying soil from 2000 to 2002 in central Georgia, USA. A field experiment was conducted on a Dothan sandy loam (fine-loamy, kaolinitic, thermic, plinthic Kandiudults). In 2000, C accumulation in cotton lint was greater in nt with rye or vetch/rye mixture but in stalks, it was greater in st with vetch or vetch/rye mixture than in ct with or without cover crops. Similarly, C accumulation in lint was greater in nt with 60 kg N ha<sup>-1</sup> but in stalks, it was greater in st with 60 and 120 kg N ha<sup>-1</sup> than in ct with 0 kg N ha<sup>-1</sup>. In 2001, C accumulation in sorghum grains and stalks was greater in vetch and vetch/rye mixture with or without N rate than in rye without N rate. In 2002, C accumulation in cotton lint was greater in ct with or without N rate but in stalks, it was greater in st with 60 and 120 kg N ha<sup>-1</sup> than in nt with or without N rate. Total C accumulation in the above- and belowground biomass in cotton ranged from 1.7 to 5.6 mg ha<sup>-1</sup> and in sorghum ranged from 3.4 to 7.2 mg ha<sup>-1</sup>. Carbon accumulation in cotton and sorghum roots ranged from 1 to 14% of the total C accumulation in above- and belowground biomass. In nt, soil organic C at 0-10 cm depth was greater in vetch with 0 kg N ha<sup>-1</sup> or in vetch/rye with 120-130 kg N ha<sup>-1</sup> than in weeds with 0 and 60 kg N ha<sup>-1</sup> but at 10-30 cm, it was greater in rye with 120-130 kg N ha<sup>-1</sup> than in weeds with or without rate. In st, soil organic C at 0-10 cm was greater in rye with 120-130 kg N ha<sup>-1</sup> than in rye, vetch, vetch/rye and weeds with 0 and 60 kg N ha<sup>-1</sup>. Soil organic C at 0-10 and 10-30 cm was also greater in nt and st than in ct. Since 5 to 24% of C accumulation in lint and grain were harvested, C sequestered in cotton and sorghum stalks and roots can be significant in the terrestrial ecosystem and can significantly increase C storage in the soil if these residues are left after lint or grain harvest, thereby helping to mitigate the effects of global warming. Conservation tillage, such as st, with hairy vetch/rye mixture cover crops and 60-65 kg N ha<sup>-1</sup> can sustain C accumulation in cotton lint and sorghum grain and increase C storage in the surface soil due to increased C input from crop residues and their reduced incorporation into the soil compared with conventional tillage, such as ct, with no cover crop and N fertilization, thereby maintaining crop yields, improving soil quality, and reducing erosion.</p>

## Korišćenje Alert opcije

Izdavači naučnih baza podataka pružaju registrovanom korisniku mogućnost korišćenja *Alert* servisa. Ta opcija Vam omogućava da sačuvate korišćene upite kako biste ih kasnije ponovo izvršavali. Osim toga, možete ih koristiti kao zahtev za periodično slanje izveštaja o novodotatim člancima koji odgovaraju tim upitima.

Da biste koristili ovu pogodnost neophodno je da korisnik otvori svoj lični nalog (regstruje se) na svakom servisu pojedinačno. Te registracije su besplatne i međusobno nezavisne i nemaju nikakve veze sa KoBSON nalogom.

Postoji nekoliko tipova Alerts obaveštenja:

1. *Search Alerts* – obaveštenja vezana za pretrage. Ako korisnik odluči da sačuva određenu formu i sadržinu pretrage (npr. konkretnu konfiguraciju ključnih reči i imena autora po kojima je pretraživao bazu, slika ispod), ima mogućnost da putem Alerts aplikacije konfiguraciju konkretne pretrage sačuva, a da mu servis automatski šalje obaveštenje na e-mail adresu kada god se u bazi pojavi neki novi članak koji odgovara kriterijumima pretrage.
2. *Volume/Issue Alerts* – obaveštenja vezana za nove brojeve i sveske časopisa. Korisnik može da izabere časopise za koje želi da dobija obaveštenja kada god izađe nova sveska časopisa, naravno pod uslovom da se taj časopis referiše u bazi.
3. *Citation Alerts* – obaveštenja vezana za citiranje izabranih članaka. Korisnik može da traži da mu se za određene članke šalju obaveštenja kada god se u bazi pojavi neki novi rad koji citira izabrani članak.

## Šta je RSS?

RSS (Really Simple Syndication) predstavlja aplikaciju za automatsko preuzimanje podataka sa internet sajtova. Uz pomoć RSS aplikacija moguće je pratiti promene na web lokaciji od interesa bez posećivanja samog sajta. RSS automatski preuzima podatke o promenama na sajtu i obaveštava korisnika o njima. Ako se na sajtu pojavi neka nova vest, tekst ili neki drugi sadržaj, korisnik dobija informaciju o tome.

Postoje dva preduslova da bi RSS funkcionisao:

1. Da web sajt ima RSS aplikaciju, tj. da je moguće preuzimati informacije na ovaj način sa njega.
2. Da korisnik ima aplikacije za čitanje RSS-a, kao i da određenu web lokaciju unese u listu sajtova za RSS informacije.

Ove aplikacije se mogu besplatno preuzeti sa Interneta.

Za istraživača koji želi da prati određene naučne časopise u elektronskoj formi (npr. preko KoBSON-a), RSS predstavlja odlično rešenje, jer se sve promene, tj. pojavljivanje novog broja i novih tekstova, automatski detektuju i informacija stiže direktno korisniku, štedeći na taj način njegovo vreme.
